Common HTML tags
Some common HTML tags include:

`<head></head>` Defines the header of an HTML document

`<title></title>` Defines the title of an HTML document. The title appears in the title bar of your browser window.

`<body></body>` Defines the body of an HTML document. All of the content that appears on your page goes between these two tags.

`<h1></h1> . . . <h6></h6>` Defines section headings. `<h1>` is the largest section heading and `<h6>` is the smallest section heading.

`<p></p>` Text between these tags will be displayed as a paragraph. Most browsers separate paragraphs with a blank line.

`<em></em>` Surrounds text to be emphasized. The text will usually be displayed in italics.

`<strong></strong>` Surrounds text to be displayed with strong emphasis. The text will usually be displayed in bold.

`<ul></ul>` Surrounds an unordered list. A bullet will precede each list item.

`<ol></ol>` Surrounds an ordered list. A number will precede each list item.

`<li></li>` Defines an individual item in a list

`<a href="http://www.something.edu/"/></a>` Defines a hyperlink. Text between these tags will be highlighted. This highlighted text is a link to another web page.

`<img src="somepicture.gif">` Inserts a picture into the document

Many more extensive reference guides to HTML tags are available on the web. See HTML: Introduction and links to online guides and tutorials: http://uits.iu.edu/page/adjz
