Dogs and Cats Assignment

Ah, finally! We are out of the book for a while. This assignment will be for you to create single page website which could act as the index page of a multi-page site (hint: such as a mid-term project).

I will give you some text and some pictures as if I were a client. Your client will be an Animal Rescue shelter, "Dogs & Cats Sanctuary," which is looking for someone to design a page for them. They don't have a lot of money, and they aren't sure that a website will really do them much good, so your design will have to sell them on the concept.

The client’s goals are:

1. To make the public aware of the plight of stray dogs and cats
2. To publicize Dogs and Cats at their facility which are available for adoption
3. How to get in touch with them.

Your Page:

1. Meaningfully title your page in the Head tag
2. Styled with an internal style sheet in Head tag
3. Have some kind of Banner which identifies the page (include one graphic), In a Div Tag named "Banner"
4. All content should be in a Div Tag named, "Content"
5. Your page should describe the Dogs & Cats Sanctuary and the plight of stray dogs and cats (compose something that sounds good)
6. Has appropriate construction including headers and sub-headers
7. Use appropriate graphics for your content (some graphics are provided by the client, but you can add more if you like)
8. Shows and describes the two featured pets, "Snaggletooth," and "Bowser," whose pictures and bios are provided.
9. Use at least one named Table
10. In a footer, provide contact information for the Dogs & Cats Sanctuary. In a Div Tag named "Contact"

The overall effect should be clear and inviting.

Be aware that if your client likes this page, they will have you add more pages in the same style and that at some point you will have to add navigation. This is not part of your current design, but keep it in mind.

Resources provided:

- Graphics for Banner
- Featured pets biographies
- and pictures of featured pets
